                                                                                                                                                                                                                                                                                                                                                                                                       В
                                 Sequence 34, Application US/09876348A
Patent No. US20020172951A1
GENERAL INFORMATION:
APPLICANT: Horwath, K. L. and Myers, K. L.
TITLE OF INVENTION: Nucleic Acid Sequences Encoding Type III Tenebrio
TITLE OF INVENTION: Antifreeze Proteins and Method for Assaying Activity.
FILE REFERENCE: RB-125-RI
               CURRENT APPLICATION NUMBER: US/09/876,348A
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          245 CCATCAACGACCTAGCCACCATCAAGGGTGAACAGATCTCAAGCATTGGCTCCCAAGAGA 304

Patent No. US20020172951A1
GENERAL INFORMATION:
APPLICANT: HOTWATH, K. L. and Myers, K. L.
APPLICANT: HOTWATH, Nucleic Acid Sequences Encoding Type III Tenebrio TITLE OF INVENTION: Nucleic Acid Sequences Encoding Type III Tenebrio TITLE OF INVENTION: Antifreeze Proteins and Method for Assaying Activity.
FILE REFERENCE: RB-125-RI
CURRENT APPLICATION NUMBER: US/09/876,348A
CURRENT FILING DATE: 2001-08-09
PRIOR APPLICATION NUMBER: 60/210,446
PRIOR FILING DATE: 2000-06-08
NUMBER: 67-67-07-07-06-08

Collins and sequenced by The Institute for Genomic Research (TIGR). The BAC library was generated from A. gambiae PEST strain DNA. All DNA was extracted from newly hatched first instar larvae to minimize the inclusion of DNA from microorganisms that inhabit the gut. The DNA is derived from mixed sexes of larvae. The BAC library was constructed at Texas A&M University BAC Center University, College Station, Texas 77843-2123, USA using a HindIII
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Mol. ORIGIN

/note="Vector: pHSS6-Sal; A yeast genomic DNA library was prepared in pHSS6-Sal; genomic DNA was size-fractionated (DNA of roughly 2-3 kb in length) prior to cloning. This library was subsequently mutagenized with a mTn-3xHA/lacz minitransposon containing lacz, URA3, and tet resistance.
